

*Founded over 40 years ago, T&M Associates is one of the most diverse and fastest-growing engineering, planning and environmental consulting firms in the Northeast, providing comprehensive services for private, local and government authorities and agencies. Headquartered in Middletown, New Jersey with local offices throughout New Jersey and in Pennsylvania, the firm combines professional expertise with modern technological resources to produce award winning engineering and planning solutions. No matter the project, we are ready and able to meet the challenge with innovative and cost-effective answers. T&M has been consistently recognized as an industry leader in engineering for transportation, environmental, real estate development, solid waste, public works and renewable energy projects.*

# WATER/WASTEWATER

As one of region's leading full service engineering consulting firms, T&M Associates has comprehensive experience in the planning, design, construction management and inspection for the supply, collection and treatment of water/wastewater. As part this experience, our firm is well versed in interfacing with management at the regulatory agencies at both the State and Federal levels, resulting in many clients receiving funding for projects often provided through these agencies.

The degree of our know-how also includes the development of plans and specifications for water supply and distribution systems, sewage collection systems, pumping stations, treatment plants, system upgrades and infrastructure replacement. Our environmental experts have studied combined sewer systems and guided combined sewer system separation through design and construction and provide fast, efficient and thorough engineering services for system emergencies requiring a prompt and professional response.

We have completed a variety of water and sewer system capacity studies, inflow and infiltration investigations, sewer system mapping and system connection permitting, as well as developed updated water and wastewater management plans and utility improvement plans.

As engineers for many municipalities and water and sewage authorities, we regularly review subdivision plans to determine the impact on the sewer and water system of the proposed development as well as determine whether the proposal is satisfactory and complies with township and state standards. In addition, we have experience in evaluating the need for off-site water and sewer improvements that are necessary to be included as part of the subdivision plans to address the impact of development on the system.

No matter the waste and wastewater challenge, T&M Associates possesses the capability to develop and execute a fully integrated plan that will address the project in the most proficient manner.
