ENERGY & UTILITIES

Now more than ever, we are confronted with the challenge of finding new and alternative methods to meet increasing energy demands and dwindling resources. T&M Associates works with our energy and utility clients to find effective solutions in the face of rising costs and overburdened power grids. We implement the latest technologies and utilize the most effective resources for every project, big or small, when it comes to energy conservation.

T&M Associates is comprised of nearly 300 professionals and technical support staff holding over 100 professional licenses. Our team includes environmental, electrical, structural, civil, traffic and transportation engineers, as well as professional planners, landscape architects, environmental scientists, land surveyors, construction inspectors and more.

Drawing from a renowned pool of expert engineers and planners, our energy and utility team members have lent their skills to a number of cutting edge projects including analysis of locations for wind farms and installation of solar arrays, in addition to making critical upgrades to existing power systems.

We stand at a crossroads, and in order to help usher in a new era of responsible energy consumption, our team works to develop, execute and maintain the most effective plan for public and private clients alike.

T&M excels at finding innovative ways to create a sustainable future; we have the know-how to successfully complete any capital improvement project, energy conservation program or facility assessment.
